TSA Secure Flight Program

Secure Flight is a behind the scenes program that enhances the security of domestic and international commercial air travel through the use of improved watch list matching. By collecting additional passenger data, it will improve the travel experience for all airline passengers, including those who have been misidentified in the past. Since **November 1, 2010** European airlines are required to transmit this information to TSA.

When passengers travel, they will be required to provide the following Secure Flight Passenger Data (SFPD) to their airline when making a reservation:

- **Name** as it appears on government-issued I.D. when traveling
- **Date of Birth**
- **Gender**
- Redress Number* (if available)

* For those who encounter misidentification, Secure Flight will help prevent watch list name confusion by using DHS TRIP, the central processing point for redress inquiries. Requests received online will be routed for redress to the appropriate DHS components. Components will review the request and reach a determination about a traveler's status. Secure Flight will use the results of the redress process in its watch list matching process to help prevent future delays for misidentified passengers.

Pleas notice that APIS-Data for all passengers flying to or from the U.S. have to be transmitted 72 hours before departure. This concerns also flights booked by Inter-Connect Marketing GmbH.
